how do you tag a git repo with the tag Lab3?

To tag a Git repository with the tag "Lab3," you can use the following commands:

1. **Create the Tag**:

   Bash   Copy

   ```bash
   git tag Lab3
   ```

2. **Push the Tag to the Remote Repository**:

   Bash   Copy

   ```bash
   git push origin Lab3
   ```

This will create a tag named "Lab3" and push it to your remote repository.
